Discover the Art of Aesthetics with Royal Bath Aesthetics

Proudly led by Samantha Wilkinson, an experienced and highly qualified aesthetics practitioner, Royal Bath Aesthetics is dedicated to enhancing natural beauty through personalised treatments designed to boost confidence and radiance. Specialising in cutting-edge anti-aging and cosmetic solutions, Samantha brings a wealth of expertise and a passion for tailoring treatments to meet each individual's unique needs.

Royal Bath Aesthetics offers an extensive range of services, including:

- Anti-wrinkle injections
 - Dermal fillers
 - Skin boosters
- Micro-needling
- Fat dissolving

These innovative treatments are available in collaboration with The Spa & Bath House at The Royal Crescent Hotel & Spa, blending luxury with advanced cosmetic care.

Unveil your most confident self with Royal Bath Aesthetics.

For further details and to book an appointment, please contact The Spa by email, spa@royalcrescent.co.uk or call 01225 823333.

Masseters & Face Slimming	£375
Platysmal Bands	£375
Hyperhidrosis-Excessive Sweating Treatment	£500

What is Botox?

Botox was the first FDA-approved prescription product authorized to temporarily improve the appearance of moderate to severe wrinkles. Botox injections consist of purified proteins produced by Clostridium Botulinum. Botox is also used in other areas of medicine to treat various medical conditions.

How it works

A Botox treatment temporarily blocks the transmission of signals from the nerves that normally tell the muscles to contract. It relaxes the underlying muscles and as a result, causes the skin to soften existing fixed lines and wrinkles and also helps prevent static lines from forming, and thus can be used as an anti-wrinkle treatment. Botox can also be used to change the balance between facial muscle groups to create a lift.

The Procedure

The positions, movement and effects of the facial muscles are first examined and marked to make the treatment accurate. Afterwards the Botox is administered into the marked areas using a very short super thin needle. Local anesthetic is not necessary as the discomfort is minimal.

Downtime is minimal and you can continue your day or return to work as normal.

Dermal Fillers

Lip Filler 1ml	£350
Chin Contouring 1ml	£300
Nasolabial Folds / Marionette 1ml	£300
Cheeks 1ml	£340

Jaw Contouring 2ml	£600
Jaw Contouring 3ml	£900
Contour Package 3ml	£900
Contour Package 4ml	£1160
Contour Package 5ml	£1400

What is Hyaluronic Acid?

It is a substance naturally present in the epidermis, especially in the most superficial area; it is able to bind to water molecules thus maintaining the correct hydration of the skin.

These chemical bonds tend to weaken over time, so more mature skin loses much of its natural moisture resulting in less radiant and toned skin and is more prone to wrinkles. For each area of the face specific fillers are provided, with different levels of reticulation, this allows us to have different types of density and structure, for a personalized treatment and a natural effect.

The main fields of application of fillers include:

Aesthetic correction of superficial and deep wrinkles (nasolabial folds, vertical lines, marionette wrinkles, periocular wrinkles) increase in the volume of soft tissues (lips, cheekbones, cheeks, chin); facial reshaping (facial contour).

Side effect and recovery times:

As with any injectable treatment, the potential for some minor side effects exists. Most commonly, these can include bruising, swelling, redness, tenderness, itching, and sensitivity at the application site. Any potential side effects will be discussed during a pre-treatment consultation. When treating the lips, a little more swelling can be expected which typically subsides within 48 hours of treatment.

Results:

The results are visible from 6 to 12 months, and it is possible to mix different treatments (botulinum toxin and filler) to obtain a more complete and harmonious result.

Skin Booster

Profilo Face	
1 Treatment	£350
2 Treatments	£600
3 Treatments	£900
Lumi Eye	
2 Treatments	£450

Age, diet, stress and pollution are factors that affect the quality of the epidermal structure, which over time undergoes a loss of collagen and elastin.

In this sense Prophilos comes to our aid, a bio-modelling anti-aging treatment based on hyaluronic acid that favours the production of collagen thus improving skin tone and elasticity. Ideal for reducing wrinkles and increasing the radiance and hydration of the face, neck and décolleté.

How does Prophilos Work?

The product is injected in small quantities into 5 points of the face thus developing a kind of network throughout the face. The high handling and low viscosity allow the product to distribute itself easily within the tissues and to remain in the skin for a long time, remodelling the face in a natural way.

The effects of Prophilos.

The presence of low molecular weight hyaluronic acid bio-reshapes the contour of the face and restores volumes; The presence of high molecular weight hyaluronic acid produces a tightening effect that flattens wrinkles and gives brightness to the skin.

Side Effects & Aftercare

Some tenderness, redness, swelling and bruising around the injection site. This is normal and will subside, usually within a few days. Use a cold pack to reduce swelling and / or redness

Do not massage or manipulate the treated area. No recovery time is required, and you can return to your daily activities immediately. Avoid any further cosmetic procedures for two days after treatment. Avoid wearing make-up for 12 hours post-treatment. Avoid strenuous exercise for 24 hours.

Microneedling is a non-invasive aesthetic treatment that stimulates the natural production of collagen by improving the texture of the skin. It is indicated for acne scars, small wrinkles, large pores, skin pigmentation and stretch marks.

It is an anti-aging mechanical stimulation technique that allows you to reach a greater depth than other treatments, producing a consistent regeneration of the tissues. It is be combined with specific serums depending on the desired effect or the type of imperfection.

For particularly sensitive areas it is possible to use an anesthetic cream to reduce the discomfort. Generally, the results are visible already after the first treatment. The condition of the skin will continue to improve for 6-12 months after a course of treatments.

It is advisable to carry out 3 to 5 sessions at an interval of about 1 month from each other. The number of sessions changes according to the imperfection to be treated and will be evaluated together in the consultation phase during the first visit. After the treatment, you must avoid exposure to the sun, apply a sunscreen.

Microneedling

Microneedling Face	£250
LED Red Light Therapy (Add on)	£50
Course of 3	£600

Fat Dissolving Aqualyx

1 Small Area	£200
1 Medium Area	£350
1 Large Area	£450

What are Fat Dissolving Injections?

Injection lipolysis, also known as intralipotherapy, is a minimally invasive medical procedure for targeted fat reduction. Commonly referred to as fat dissolving injections, intralipotherapy is a form of mesotherapy and one of the nonsurgical fat reduction options.

Fat Dissolving Injections are a safe, effective treatment that reduces fat cells in the treated area.

It produces long lasting results, which means you can banish those annoyingly wobbly bits.

These injections can be used to treat small, exercise resistant, pockets of fat around the chin, chest, thighs, saddle bags, and abdomen

Aqualyx is based on a formulation containing deoxycholic acid. This is a secondary bile acid which the body naturally produces to liquefy the fat in the gut.

Made up from a number of different plant-based compounds that have been refined in a lab environment. Aqualyx dissolves the membranes of fat cells in the treated area. The fat cells become unstable and break open. The fatty acids contained within the cell are then eliminated by macrophages (part of the body's immune system) and the liver.

Are Fat Dissolving Injections suitable for me?

If you are maintaining a healthy lifestyle and are close to your ideal body weight but have isolated stubborn areas of fat, then injectable dissolving might be suitable. If you have significant weight, then fat dissolving is not suitable for you.

Fat dissolving is not suitable if you:

Have diabetes, liver or kidney disease, have active skin problem in the area to be treated, are taking blood thinning medicine.

Key facts:

Number of treatments: 3 – 5 body, 1 – 3 face,

How often: 6-week intervals, Downtime: 7 – 10 days.

Post treatment: swelling, redness, bruising and tenderness, sometimes numbness to the treated area for a few weeks and itchiness
